Forecast for Tuesday 01 Dec 2020

Weather: Some clear spells overnight but also scattered cloud. Cloud will soon thicken from the west during the day but still but the chance of a few brighter spells in the morning especially further east. For much of the west of the area the cloud will thicken at times during the day to give some drizzly outbreaks and cloud will shroud the tops. Later in the evening a band of rain will move southeast across Scotland, this will mark the change to far colder conditions.

Chance of cloud free mountain/hill tops above 800m: In the morning some tops further east will be clear, 70% chance but more westerly peaks will soon have some lower cloud around. In the afternoon cloud will lower over most areas to 4-500m.

Visibility: Good visibility for most areas during the morning but this will become moderate or poor in the afternoon in the in drizzly outbreaks.

Met Office Aberdeen Meteorologist's View

Freezing level will be low in the morning but rises in the afternoon, it will certainly feel quite cold on the hills especially in the strengthening southwesterly winds, strong gust later in the day.

Forecast for Wednesday 02 Dec 2020

Weather: A frontal band of rain will push east across Scotland during the early hours of Wednesday, it will be quite weak and should have cleared east by sunrise. Then it will be a bright start with some early sunshine. Showers will readily develop in the west and these will be wintery above 400m, the showers are likely to be heavy and merge at times to give longer spells of snow on the hills and 10-15cm can be expected to accumulate higher on the munros, particularly around Lochaber and Glencoe.

Maximum wind: Southwesterly 25mph with gusts 35-40mph.

Chance of cloud free mountain/hill tops above 800m: Once the rain has cleared east 50% chance of cloud free tops. During the afternoon in heavier showers, cloud will become broken above 500m.

Visibility: Visibility will be moderate in the early morning rain but soon become good for a time. In wintery showers visibility may fall very quickly and become very poor for a time, navigation may become very tricky in potential white out conditions.

Temperature: **Glens:** Plus 6 falling to plus 1 Celsius later in the day.
At 800m: Plus 2 falling to minus 3 Celsius
Freezing level: 1000m falling to 400m
